# The Sun Throughout the Day

Without the sun the earth would be very dark and very cold. In fact, the sun is the most important source of light and heat to the earth. But, the sun does not give us the same amount of light and heat all of the time.

## Morning

In the morning the sun is just starting to rise. There is some light and the sun is providing some heat.

## Afternoon

In the afternoon the sun is high in the sky. There is a lot light and the sun is providing a lot of heat.

## Evening

In the evening the sun is setting. There is some light and the sun is still providing some heat.

## Night

At night the sun is not seen. There is no light from the sun and the sun is not providing very much heat at all.
