

# Adaptations

## Polar Bears

1. The white fur helps camouflage them so they can stay safe.
2. Their fur is thick to keep them warm in the cold.

## Duck

1. The web feet help them move in the water.
2. The oil keeps the water away from the skin.

## Frog

1. Their strong legs help them hop higher, further and quicker.
2. Their sticky tongue helps them catch insects.

## Walking Stick

1. A stick bug looks like a stick.
2. This helps the stick bug because other animals can not see it, or think it is a stick.

## Dolphin

1. A dolphin can hold its breath for a long time and swim well.
2. If it had gills, it would not need to come up for air.

## Skunk

1. Skunks can spray a very bad smelling liquid.
2. This helps by making other animals, who could hurt them, run away.

Animal	Adaptation
Cheetah	Can run very fast to catch prey.
Giraffe	Long neck to get leaves from trees.
Monkey	Strong tail to hold onto branches and help balance.
Clownfish	Covered in mucus so they can hide in an anemone.
Birds	Hallow bones so they are lighter, so they can fly more easily.
Chameleon	Can change colour to help camouflage themselves.
	...many possible answers.
