

Name: _____

Date: _____

MONARCH BUTTERFLY

In the boxes, label the stages of life of a butterfly. Use the numbers 1 through 4, writing them beside the pictures, to indicate the order of these stages of life.

The monarch butterfly is found in North America.

Its wings are orange and black. The monarch goes through a complete change, called metamorphosis. The length of time taken to transform is around 4 to 6 weeks, but it could be sped up in warmer temperatures.

adult	orange	chrysalis	weeks	larva
America	warmer	metamorphosis	egg	north

Name: _____

Date: _____

Other things in our environment go through changes as they grow. Use numbers to show the order of growth for a frog and a bean in the examples below.
