All about Mammals

Mammals are animals that have hair on their bodies.

Female mammals produce milk for their young to drink.

Mammals take good care of their young. Some

mammals grow very slowly and others

mature quickly. Some young learn to get food

by watching their mother. Most mammals live on

land, but a few spend time in the water.

Mammals have live babies. Mammals are warm-

blooded. They shed hair and the

hair comes in many colours. Mammals breathe air

to get oxygen. Bats are the only mammals that can

fly.
