

In approximately one week you will have a science quiz. The quiz will be very similar to the review sheet you made today in science class. If you did not get your review complete please look for a complete copy on Mr. Collinson's webpage. Please use your review sheet to study for your quiz. If you are having any trouble, please e-mail me so that I can help. Please bring your review sheet back to school when you are done studying. The quiz covers lessons 1 through 9. The main concepts are;

- What makes up soil?
- What are the different types of soil?
- What are the characteristics of the different types of soil?
- What happens when you separate soil?
- How well do different soils drain water?
- How does composting work?
