

The ocean, home to many organisms, big and small.

There are about 1200 blue whales in the oceans of the world. Imagine an ocean with 12000 blue whales.

A park, with lots of grass space and trees.

Squirrels can be fun to watch scamper around. Imagine a park with 10 000 squirrels.

A desert, home to very specialized organisms.

A small cactus can have roots that stretch out over 10 feet to get water. Imagine a desert in which there were so many cacti that they all touched each other.

A forest, with some tall old trees, and many other organism living below.

Trees grow to get to the sun's light. Imagine a forest in which the trees are so dense that their leaves block out the sun.

Planet Earth, home to many organisms, including humans.

There are currently about 7 billion people on Earth. Scientists predict this number to be up to 10 billion by 2150.
