

*Observations:*

Without Lens

With Lens

*Discussion:*

1. Why does your view of the objects change after adding the plastic wrap and water?

*The light refracts as it enters the water. The shape of the water causes the light to refract at a larger angle. We see the refracted image.*

2. Using the same principles you have used to make this magnifying lens, can you make a magnifier to make it easier to read a newspaper? Test your idea, then draw the results.
