

Grade 7 Science

Unit 4: Structures

Structure Testing

Today is a period designated to finish and then test your structures. Be sure you are paying attention as I review the testing procedures, there are several safety rules to which you must adhere. Failure to act safely will result in your removal from the room.

- All students will wear safety goggles while testing is being performed.
- Beams are only tested above the blue gym mats.
- Only one person is involved with testing.
- You **MUST** keep your fingers in proper position while testing your column and your panel.

The remainder of class is used to answer the questions on the back of the worksheet. Anything not done today is homework, there will be no further class time.
